ABSTRACT

A collapsible storage hamper for storing articles comprises a pair of twistable frames, two or more supporting strips and a flexible hamper body. The top has an opening, the front side and the rear side are two separate pieces, the left side, the right side and the bottom can be one or more pieces. The pieces may be sewed together to form the body; the edge of each of the front piece and the rear piece is made into a sleeve, and each sleeve contains inside, one of the frames. The left piece, the right piece or the bottom piece may be sewed to have two or more tube-shaped sleeves each with an opening at one end. Each of the supporting strips is inserted into or removed from the opening of the corresponding tube-shaped sleeve. One or more dividing layers can be added vertically in the body.
